

RESTFUL API

The restful api will enable organiser to create profile by registering themselves to the system

Once login the organiser can create events, delete events, update events and view events

He can also view participant's information, events they have entered, delete and update participants. The workflow can be created to send email to notify participant of changes

Participants must be able to Register own accounts then login

A RESTful API specification table

1 Organiser endpoint

HTTP methods	Route	description	Role required	Request body	response
GET	api/event/{eventl}	View event	organiser	{ title, description, date, location}	200 (OK), 404 (No Found)
POST	api/event	Create event,	Organiser	{ title, description, date, location}	200 (Created), 400 Bad Request
PUT	api/event/{eventld}	Update event	Organiser	{ eventld}	201 Ok; 400 not found
DELETE	api/event/{eventld}	Delete event	Organiser		204 (No Content) ,404 (No Found)
